CURRENT OUTBREAKS OF NON-MULTIRESISTANT MRSA

Non-multiresistant EMRSA-15 (ciprofloxacin-resistant, erythromycin-susceptible) was newly isolated from 1 patient in Rotorua Hospital.

^ψ The DN1 MRSA strain is a newly designated MRSA strain. DN1 MRSA is resistant to ciprofloxacin and erythromycin. It commonly strongly reacts with phages 52, 52A, 79, 80, 53, 54, 83A, 85 and 95; occasionally strongly reacts with phages 81, 77 and 83A; and has additional weak reactions with other phages. The DN1 MRSA strain was originally recognised from 4 Dunedin community patients in late 2004, and has been subsequently isolated from 9 patients in various North Island locations.
